

Softscene AI Studio

Team members:

Shavini Fernando, Robyn Moore

Platforms used:

Mac OS, Windows 11 (64-bit)

Software used:

Web browser (Google Chrome), Mac terminal, Windows Power Shell, VS Code, TextEdit

Main applications:

Python (3.12), Streamlit(1.5), pyarrow (16.0)

Libraries and 3rd party API:

OpenAI, Pillow, ImageIO, pyarrow, python-dotenv

Commands for use:

- Clear cache: streamlit cache clear
- Run the application: streamlit run_Home.py

Challenges and errors encountered:

- Version difference (upgraded versus old versions)
- Operating system differences (Mac OS, Windows 11)
- The generative AI platform (OpenAI) was not free, so the demo was not able to complete with real storyboards.

Future improvements:

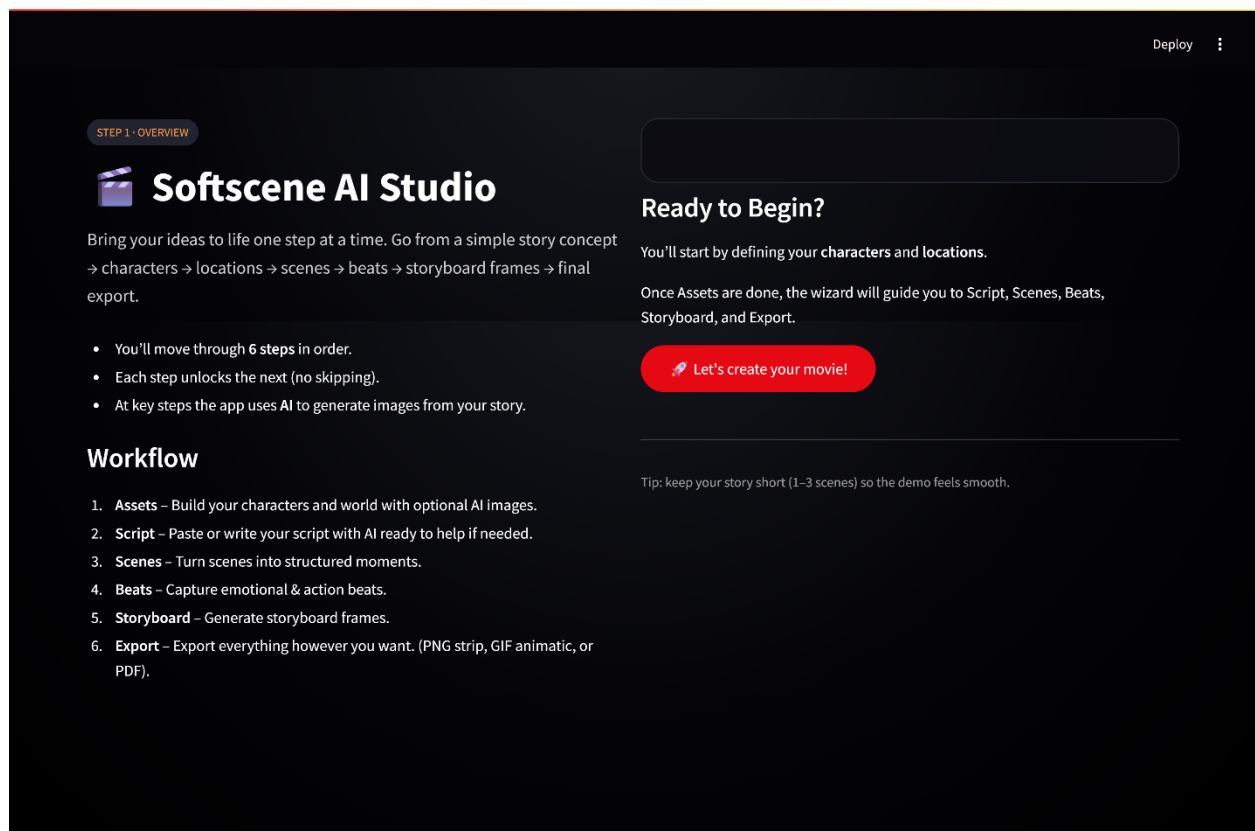

- Go with an active generative AI platform paid or free.
- Add more background images to make it feel more engaging and inside a movie theater.
- Make a database so it can store many data without keeping all in json format.
- Make it flexible and platform independent (for mobile phones, tablets.)

File structure:

1. Streamlit
2. Assets
3. Data
4. Pages: assets page, scripts page, beats page, scenes page, storyboard page, export page
5. Home.py

Pages:

Deploy

STEP 2 • SCRIPT

Write / Paste Your Script

Keep it short (1–3 scenes). This script will be used to create scenes, beats, and AI storyboard frames.

Your Script

lion walks in the jungle. lion see the rabbit. lion angrily try to kill the rabbit.

Save Script

Or Generate Script with AI ✨

Enter story idea (optional)

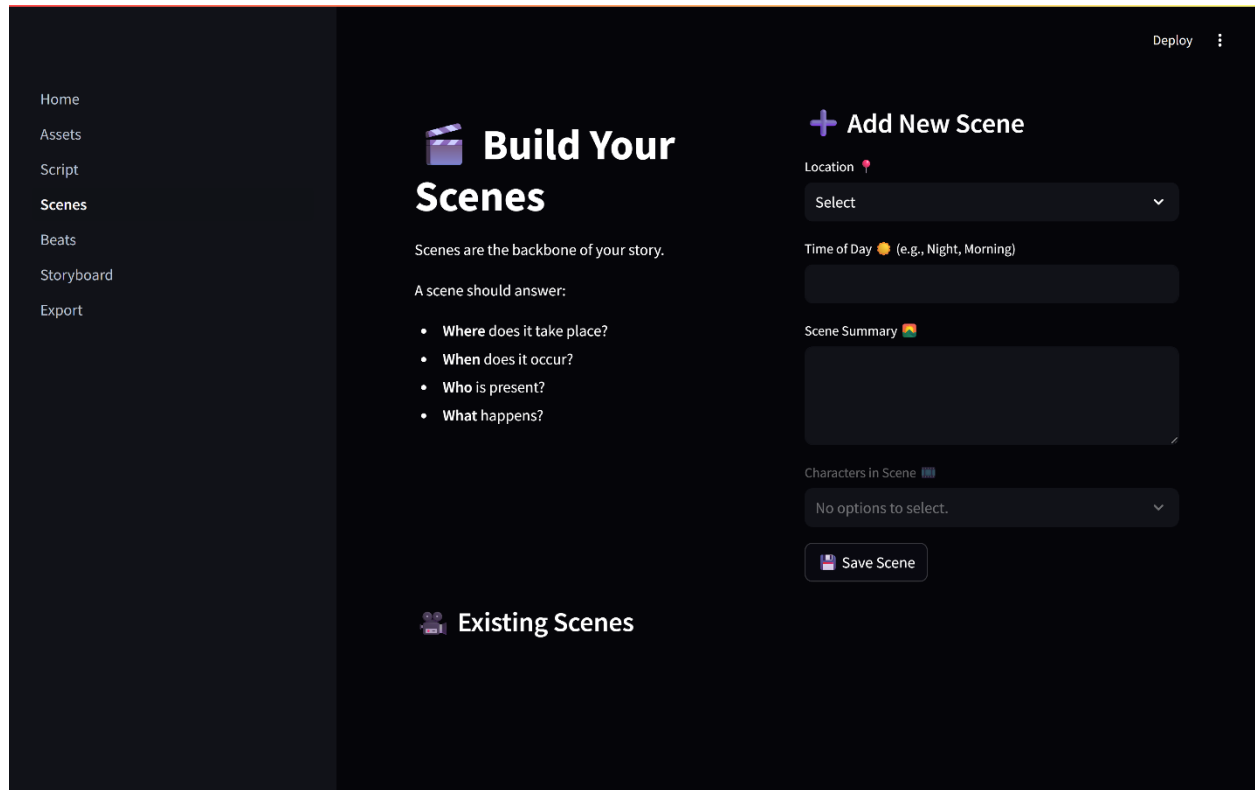

Example: A greedy lion learns a lesson from a clever rabbit.

Generate Script with AI (Fallback Enabled)

Deploy

Generate Storyboard Frames

Here we will generate AI storyboard frames for each beat 😊.

The AI will create cinematic, black-and-white storyboard sketches.

Storyboard Frames
